# GreenCommerce

GreenCommerce is the number one solution for all commercial parties active in the fresh produce sector that want to effectively and efficiently automate their company's operational processes.

GreenCommerce was built specifically for businesses that are involved in the fruit and vegetable sector. The core of the system consists out of functionalities related to the commercial purchase- and sales processes, real-time inventories and the production processes. All inventory logging is done based on batches, but it's also possible to log specific actions at the level of pallets.

On top of the stable core functionalities that GreenCommerce offers, it is also possible to make use of several extra module-packages such as operating profits per company, transport planning, quality control, tracking and tracing, warehouse management and many more. These packages can be used in a flexible manner and combined in almost every possible way in order to perfectly align with the processes in your company.

Because of its strong position in the fruit and vegetable sector and its overall flexibility, GreenCommerce is a very suitable solution for every business that is involved in the sector.

# 02. Datawarehouse

Exporters

Trade organization

Importers

Transporter

Growers association

Packers

## Benefits

- ✓ Clear insight in commercial and financial situations by creating dashboards with graphs that you can customize to your own liking
- ✓ Fast availability of data, without delays in your GreenCommerce
- ✓ Data is extracted from GreenCommerce, then converted and loaded into a model. It offers the possibility to work with e.g. Microsoft's PowerBI

## **Package 02.**

# **Datawarehouse**

Do you want to be able to see all your commercial and financial data at one glance, without having to spend a large amount of time putting results in Excel in order to compare the numbers with former years? We have already done this for you with the Datawarehouse package. Insight in data has never been so **important**. This package is made to derive valuable data from GreenCommerce and turn it into **informative overviews** and reports. The package will create an overall better financial and commercial overview. As well as delivering easy available data, that you can use to visualize in your own Business Intelligence tool, we have developed a **preset of dashboards** in Microsoft's PowerBI that you can use right off the bat.

### **Challenge for businesses**

So much data is collected from software packages that it is becoming increasingly difficult to extract valuable information from it. Retrieving data often takes a lot of time, which usually causes delay in the speed of the system.

### **GreenCommerce solution**

With the Datawarehouse package you can compare different types of data quickly and easily. You will derive valuable commercial and financial overviews without losing speed of your GreenCommerce. You will get optimal insight into processes and you can easily work through large amounts of data. The dashboards and overviews can be arranged to your own wishes, which means you can decide yourself which data is most valuable to your organization. With help from these data dashboards, the entire sales and marketing strategy can be optimized, as well as the financial process.

# 04. Digital communication

Growers association

Exporters

Importers

Trade organization

## Benefits

- ✓ A connection with FreshBabel Messenger that ensures that messages about orders, shipments, transport, etc. are digitally loaded into your GreenCommerce, or in the system of your client or supplier
- ✓ Possibility to compile Excel templates that can be used to import purchase- and sales orders
- ✓ Possibility to load XML files and convert them into purchase- and sales orders
- ✓ No more retyping of e.g. purchase- and sales orders into your system

## **Package 04.**

# **Digital communication**

Are you tired of retyping orders into your system? Do you want to load these and other incoming messages automatically into your system? Then the "Digital communication" package can save you **a lot of time!** More and more retailers are imposing stricter requirements on suppliers in the field of **digital communication**. Important work processes, such as incoming or outgoing orders, shipments and invoices can be handled automatically and efficiently with this package (by means of digital communication with customers). Messages about orders, shipments and invoices can be exchanged in a universal way through our integrated connection to FreshBabel Messenger. Retyping of these messages will be **a thing of the past.**

### **Challenge for businesses**

More and more companies are able to communicate digitally about both commercial and logistical data. In addition, the retail sector is placing increasingly strict demands on suppliers around digital communication; purely to professionalize and speed up the process. In order to be able to communicate appropriately with customers, it is important to comply with these requirements.

### **GreenCommerce solution**

Various EDI messages (Electronic Data Interchange) are supported by GreenCommerce, both for incoming and outgoing messages. This saves time as the process of manually entering orders into the system will disappear. It is also possible to load Excel sheets and XML files from suppliers easily into the system, so that orders can be processed quickly and correctly. The connection with FreshBabel Messenger ensures clear digital communication in the area of relationships (GLN), item designations (GTIN), location designations (GLN), track and trace information (GGN, QS1 SSCC), etc.

# 06. External locations

Exporters

Trade organizations

Importers

Transporters

Growers association

Packers

## Benefits

- ✓ Multiple locations to create a separation in inventories
- ✓ Easy administration as sales processes run automatically
- ✓ Monitoring external locations by means of automatically-sent pickinglists, delivery notes, etc.
- ✓ By selecting multiple detours, it is possible to confirm delivery of multiple orders in one go

## **Package 06.**

# **External locations**

Doesn't your company have its own warehouse or does your company use external locations to **keep stock separate?** Do you want this process to go as quickly and smoothly as possible? Then the "External locations" package can add a lot of value for you! When working with external locations, the items do **not physically** end up in your own warehouse; this stock is administratively stored so that it can be purchased or sold. Administrative actions can be **easily** carried out while working at the pallet level!

### **Challenge for businesses**

The administrative tasks that come along when loading from an external location is a time-consuming process and inefficient.

### **GreenCommerce solution**

This expansion to GreenCommerce selects the best available pallets on the external location and processes it in a loading. The external location can then be controlled with the correct loading and order-picking information. This eliminates a lot of administrative tasks. In addition, a lot of time can be saved by selecting multiple detours to external locations and to confirm delivery via one button.

# 07. Financial advanced

Exporters

Trade organizations

Importers

Transporters

Growers association

Packers

## Benefits

- ✓ A link to Blue10
- ✓ Detailed invoice-information from a purchase or sale that can be loaded into your own financial package
- ✓ Accepts connections with Twinfield, Exact, Exact Online, Opera, AccountView, MultiVers, King and Quadra

## **Package 07.**

# **Financial advanced**

Get your **financial administration** in order with the Financial advanced-package. Did you split your articles into products and elements? Do you want the invoiced amount to be evenly split into product, elements and all other surcharges to be registered separately (bonus, profit, tax, etc.)? With this package it is possible to use the sub-invoice lines. This is made for both purchase- and sales invoices. This package also includes the processing of transactions per ledger towards a **financial package**. Finally, the package offers a **link with Blue10**, with which the incoming invoices (via PDF in your mailbox) can be automatically filtered in your financial package.

### **Challenge for businesses**

Detailed information about a purchase or sale of an item is increasingly being requested from customers and/or management. The invoice often only shows the final amount that must be paid, but not how these costs are put together.

### **GreenCommerce solution**

The sub-invoice lines provide detailed information that is often not mentioned on invoices. The sub-invoice lines ensure that the total amount is split into different cost items. This information can easily be imported into your own financial package. In addition, invoices and packing slips can be processed via Blue10 in GreenCommerce.

# 10. GreenXchange

Growers association

## Benefits

- ✓ Real-time insight into the processing of orders and the accumulated stock location
- ✓ Clear insight into production forecasts
- ✓ Optimum traceability, from pallets to grower

## **Package 10.**

# **GreenXchange**

Does your association have **multiple growers** affiliated? Do you want an easy and efficient way **to manage** your growers and communicate with them? Then the GreenXchange package is the solution for you! GreenXchange **automates** daily business processes for growers and ensures an efficient way of communicating with partners. Thanks to linking possibilities, the platform is very suitable for fresh produce companies that **centrally organize the sales activities** for all their growers.

### **Challenge for businesses**

Communicating and keeping track of business processes such as orders, stock, transport and managing cultivation data is still regularly done in old-fashioned ways. For fresh produce companies that centrally organize the sales activities for all their growers, it is a challenge to gain insight in for example stock and orders.

### **GreenCommerce solution**

With GreenXchange you can easily and quickly gain control over cultivation activities. It is a communication platform where you can quickly process orders and stock, arrange transport and manage cultivation data, wherever and whenever you want. Because GreenXchange is linked with GreenCommerce, it is very suitable for growers associations and sales organizations that take care of the sales for growers. As a sales organization, you can seamlessly connect with your growers and immediately gain insight into processed results.

# 20. Translations

Exporters

Trade organizations

Importers

Transporters

Packers

## Benefits

- ✓ Work more efficiently when multiple nationalities within a company work in the same system
- ✓ English is already available, other languages in consultation

## **Package 20.**

# **Translations**

Do you have **multiple nationalities** working in the same office? Then the Translation package can be the solution, so every colleague can work in his or her **own language!** Especially for internal companies with international employees, this package could bring more efficiency in general.

### **Challenge for businesses**

When companies work with international colleagues, it is inefficient to work in a system that they don't understand the language of.

### **GreenCommerce solution**

Per user, the preferred language can be set without troubling other colleagues.
